

Test funcionales para el 5

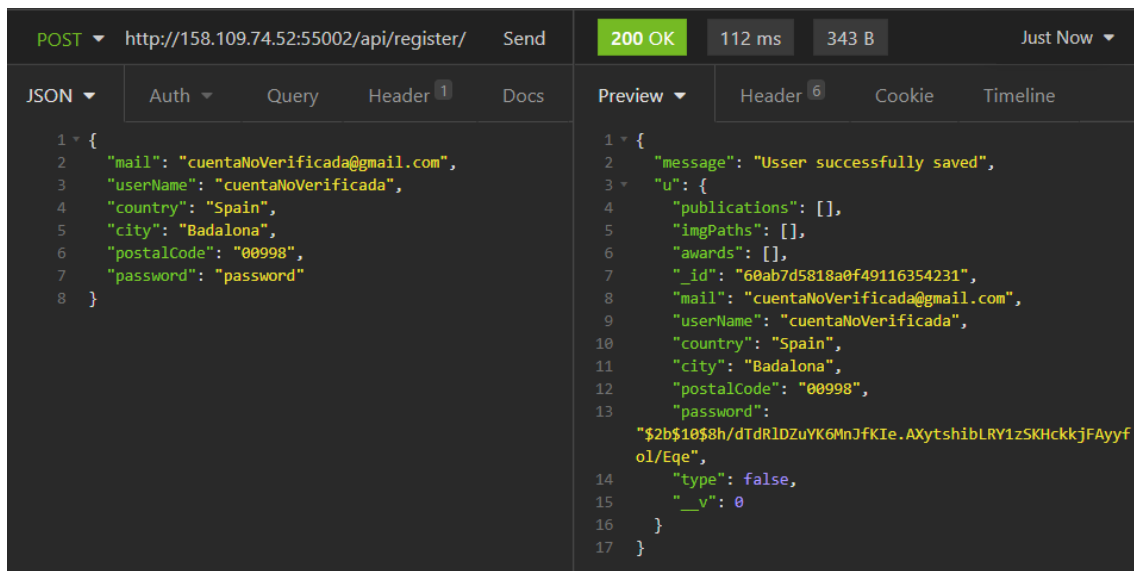

Organizado por: Molina Miranda, Jonathan

Para las pruebas a nivel de Back-End se ha utilizado la API de Insomnia que nos permite hacer las peticiones al servidor.

Para cada prueba se adjunta una imagen donde se aprecia la URL de la petición específica, en la izquierda los datos enviados y en la derecha, la respuesta obtenida por el servidor.

Registro de usuario.

-CASO NORMAL (OK)

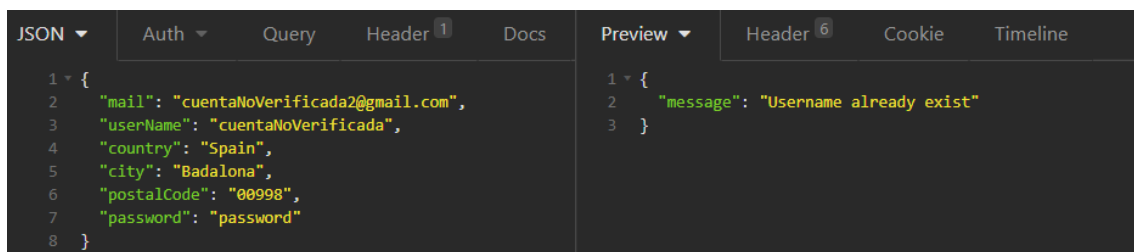

The screenshot shows an Insomnia API client interface. The top bar indicates a POST request to `http://158.109.74.52:55002/api/register/` with a status of 200 OK, 112 ms response time, and 343 B body size. The left pane shows the JSON body of the request, and the right pane shows the JSON response.

```
1 {
2   "mail": "cuentaNoVerificada@gmail.com",

17 }
```

- USUARIO EXISTENTE -> (OK)

The screenshot shows the same Insomnia API client interface. The left pane shows the same JSON request body as the previous screenshot. The right pane shows the JSON response, which indicates that the username already exists.

```
1 {
2   "message": "Username already exist"
3 }
```
